

Free Mount Cylinder

CU Series

A space-saving air cylinder with multiple surfaces capable of mounting directly. Offered in rich variations.

Space-saving

The multiple surface direct mounting with a square body and no brackets allows the freedom of the mounting surface. This enables space-saving designs for equipment.

Mounting

Axial mounting
(Body tapped)

Vertical mounting
(Body through-holes)

Lateral mounting
(Body through-holes)

Series Variations

Series	Action	Rod	Bore size (mm)	Page
Standard CU Series	Double acting	Single rod	6, 10, 16, 20, 25, 32	727
	Single acting	Double rod		734
Non-rotating CUK Series	Double acting	Single rod		739
	Single acting	Double rod		746
Long stroke CU Series	Double acting	Single rod		750
	Single acting	Double rod		754
Long stroke, Non-rotating rod CUK Series	Double acting	Single rod		760
With air cushion CU-A Series	Double acting	Single rod	20, 25, 32	764
For vacuum ZCUK Series	Double acting	Single rod	10, 16, 20, 25, 32	768
				777

Precautions on Free Mount

1. Operating speed

Make sure to connect a speed controller to the cylinder and adjust its speed to 500 mm/s or less.
If a load is to be attached to the end of the rod, adjust the speed to the maximum speed shown in Graph (1) or less, in accordance with the added mass.

Graph (1) Load Mass and Maximum Speed

How to read the graph
• Using the CU10 to drive a load weighing 2.5 kg: From the vertical axis in the graph on the left, extend the horizontally from 2.5 kg., and drop down from the point at which it intersects with the tube bore $\phi 10$. The maximum speed will be 141 mm/s.

2. Rod end allowable lateral load

Make sure that the lateral load that is applied to the rod end will be no more than the values shown in the tables.
The tables show the value for a single rod.

Standard Double Acting, Single Rod

						A90V	A90	●	—	●	—	—	—	—	—	

*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.

*2 1 m type lead wire is only applicable to D-A93.

* Lead wire length symbols: 0.5 m Nil (Example) M9NW
1 m M (Example) M9NWM
3 m L (Example) M9NWL
5 m Z (Example) M9NWW

* Solid state auto switches marked with "○" are produced upon receipt of order.

* Since there are applicable auto switches other than the above, refer to page 782 for details.

* For detail about auto switches with pre-wired connector, refer to pages 1340 and 1341.

* Auto switches are shipped together but not assembled.

Symbol
Double acting, Single rod, Rubber bumper

Made to Order Specifications
[Click here for details](#)

Symbol	Specifications
-XB6	Heat resistant (-10 to 150°C)
-XB7	Cold resistant (-40 to 70°C)
-XB9	Low speed (10 to 50 mm/s)
-XB13	Low speed (5 to 50 mm/s)
-XC8	Adjustable stroke cylinder/Adjustable extension type
-XC19	Intermediate stroke (5 mm spacer)
-XC22	Fluororubber seals

For clean room specifications, refer to the [Web Catalog](#).

Tightening Torque/ When mounting the CU series, refer to the below table.

Bore size (mm)	Hexagon socket head cap screw dia.	Proper tightening torque (N·m)
6, 10	M3	1.08 ±10%
16	M4	2.45 ±10%
20, 25	M5	5.10 ±10%
32	M6	8.04 ±10%

**Moisture Control Tube
IDK Series**

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions. Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the [Web Catalog](#).

Specifications

Low-speed Cylinder

CU X Mounting bracket Bore size — Stroke

Low-speed Cylinder

Smooth operation with a little sticking and slipping at low speed.
Can start smoothly with a little ejection even after being rendered for hours.

Specifications

Bore size (mm)	10	16	20	25	32
Fluid	Air				
Proof pressure	1.05 MPa				
Max. operating pressure	0.7 MPa				
Ambient and fluid temperature	Without auto switch: -10 to 70°C (No freezing) With auto switch: -10 to 60°C (No freezing)				
Lubricant	Not applicable (Non-lube)				
Piston speed	ø10, ø16: 1 to 300 mm/s ø20 to ø32: 0.5 to 300 mm/s				
Cushion	Rubber bumper on both ends				
Rod end thread	Male thread				
Stroke length tolerance	+10 0				

Minimum Operating Pressure

Bore size (mm)	10	16	20	25	32
Minimum Operating Pressure (MPa)	0.06	0.06	0.05	0.05	0.05

The dimensions are the same as the double acting, single rod type.
Refer to the **Web Catalog** for details.

Construction

ø6

ø10

ø16 to ø32

With auto switch

Component Parts

No.	Description	Material	Note
1	Cylinder tube	Aluminum alloy	Hard anodized
2	Head cover	Brass	ø6 to ø10, Electroless nickel plated
		Aluminum alloy	ø16 to ø32, Chromated
3	Piston	Brass	ø6
		Aluminum alloy	ø10 to ø32, Chromated
4	Piston rod	Stainless steel	
5	Bumper A	Urethane	
6	Bumper B	Urethane	
7	Retaining ring	Carbon tool steel	Phosphate coated

Note 1) Figures in the table above are used as a reference when mounting the auto switches for stroke end detection. In the case of actually setting the auto switches, adjust them after confirming their operation.

Note 2) Negative figures in the table W indicate an auto switch is mounted inward from the edge of the cylinder body.

Note 3) In the case of the 5 stroke or the 10 stroke, there are times in which the auto switch will not turn OFF or 2 auto switches will turn ON simultaneously due to their movement range. Therefore, set the position approximately 1 to 4 mm outward from the values given in the table above. Then, perform an operation inspection to make sure that the auto switches operate normally (if 1 switch is used, make sure that it turns ON and OFF properly; if 2 auto switches are used, make sure that both auto switches turn ON).

Note 4) () in column W is the dimensions of D-A90 and A93.

Operating Range

Auto switch model	Bore size (mm)					
	6	10	16	20	25	32
D-A9□, A9□V	5	6	9	11	12.5	14
D-M9□, M9□V						
D-M9□W, M9□WV	3	4	5.5	7	7	7.5
D-M9□A, M9□AV						

* Since the operating range is provided as a guideline including hysteresis, it cannot be guaranteed (assuming approximately $\pm 30\%$ dispersion).
It may vary substantially depending on an ambient environment.

32	35	27

Caution on Proximity Installation

When free mounting cylinders equipped with auto switches are used, the auto switches could activate unintentionally if the installed distance is less than the dimensions shown in the table. Therefore, make sure to provide a greater clearance. If the cylinders must be mounted closer than the mounting pitch in the table due to unavoidable circumstances, a magnetic shield must be provided to prevent the cylinders from interfering with each other.

Therefore, install a steel plate between the cylinder tubes, or attach a magnetic shielding plate (MU-S025) to the cylinder where it faces the other cylinder's auto switch. Auto switches may malfunction if a magnetic shield is not used.

Dimensions of shield plate (MU-S025) that is sold separately are indicated as reference.

Material: Ferrite stainless steel, Thickness: 0.3 mm
The product can be attached to the cylinder since the bottom side is a seal type.

* For the auto switch weight, refer to page 1271.

Tightening Torque

When mounting the CUW series, refer to page 728.

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the [Web Catalog](#).

Construction

ø6

With auto switch

ø10

*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.

*2 1 m type lead wire is only applicable to D-A93.

* Lead wire length symbols: 0.5 m Nil (Example) M9NV
1 m M (Example) M9NWM
3 m L (Example) M9NWL
5 m Z (Example) M9NWX

* Solid state auto switches marked with "○" are produced upon receipt of order.

* Since there are applicable auto switches other than the above, refer to page 782 for details.

* For detail about auto switches with pre-wired connector, refer to pages 1340 and 1341.

* Auto switches are shipped together but not assembled.

Tightening Torque

When mounting a CU single acting series, refer to page 728.

Spring reaction force

Refer to page 1572 (Table (3): Spring Reaction Force).

Moisture Control Tube
IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions. Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the [Web Catalog](#).

Construction

Single acting, Spring return

Component Parts

No.	Description	Material	Note
1	Cylinder tube	Aluminum alloy	Hard anodized
2	Head cover	Brass	ø6 to ø10, Electroless nickel plated
		Aluminum alloy	ø16 to ø32, Chromated
3	Piston	Brass	ø6
4	Piston	Aluminum alloy	ø10 to ø32, Chromated
5	Piston rod	Stainless steel	
6	Bumper A	Urethane	
7	Bumper B	Urethane	
8	Return spring	Piano wire	Zinc chromated

Note 1) Figures in the table above are used as a reference when mounting the auto switches for stroke end detection. In the case of actually setting the auto switches, adjust them after confirming their operation.

Note 2) Negative figures in the table W indicate an auto switch is mounted inward from the edge of the cylinder body.

Note 3) In the case of the 5 stroke or the 10 stroke, there are times in which the auto switch will not turn OFF or 2 auto switches will turn ON simultaneously due to their movement range. Therefore, set the position approximately 1 to 4 mm outward from the values given in the table above. Then, perform an operation inspection to make sure that the auto switches operate normally (if 1 switch is used, make sure that it turns ON and OFF properly; if 2 auto switches are used, make sure that both auto switches turn ON).

Note 4) () in column W is the dimensions of D-A90 and A93.

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the [Web Catalog](#).

* For the auto switch weight, refer to page 1271.

Allowable Rotational Torque

Bore size (mm)	6	10	16	20	25	32
Allowable rotational torque (N·m)	0.0015	0.02	0.04	0.10	0.15	0.20

Tightening Torque

When mounting the CUK series, refer to page 732.

Theoretical Output

Specifications are the same as CU series double acting, single rod. Refer to page 728.

Auto Switch Mounting Position

For the auto switch mounting position of the CDUK series, refer to page 732, since specifications are the same as standard type, double acting, single rod type.

⚠ Precautions

Be sure to read this before handling the products. Refer to page 20 for safety instructions and pages 21 to 30 for actuator and auto switch precautions.

Operating Precautions

⚠ Caution

1. Do not place your fingers in the clearance between the non-rotating plate and the cylinder tube.

Your fingers could get caught between the non-rotating plate and the cylinder tube when the piston rod retracts. Therefore, never place your finger in this area.

Because the cylinder outputs a great force, it could lead to injury if precautions are not taken to prevent your fingers from getting caught.

2. When using the non-rotating type, make sure that rotational torque is not applied to the piston rod. If rotational torque must be applied due to unavoidable circumstances, make sure to use it at the allowable rotational torque or less, which is shown in the table on the right.

Construction

Component Parts

No.	Description	Material	Note
1	Cylinder tube	Aluminum alloy	Hard anodized
2	Head cover	Brass	ø6 to ø10, Electroless nickel plated
		Aluminum alloy	ø16 to ø32, Chromated
3	Piston	Brass	ø6
		Aluminum alloy	ø10 to ø32, Chromated
4	Piston rod	Stainless steel

* For the auto switch weight, refer to page 1271.

Theoretical Output

Specifications are the same as double acting, double rod (CUW series). Refer to page 735.

Tightening Torque

When mounting the CUKW series, refer to page 728.

Allowable Rotational Torque

Ensure that rotational torque is not applied to the piston rod of the CUKW series. If rotational torque are applied unavoidably, refer to page 747.

Auto Switch Mounting Position

For the auto switch mounting position of the CUKW series, refer to page 738, since specifications are the same as double acting, double rod type.

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the [Web Catalog](#).

Symbol	Specifications
-XC22	Fluororubber seals
-XC34	Non-rotating plate with workpiece mounting screw (No extended part on the rod end)

Specifications

Bore size (mm)	6	10	16	20	25	32
Fluid	Air					
Proof pressure	1.05 MPa					
Maximum operating pressure	0.7 MPa					
Minimum operating pressure	0.23 MPa	0.18 MPa		0.16 MPa		
Ambient and fluid temperature	Without auto switch: -10 to 70°C (No freezing) With auto switch: -10 to 60°C (No freezing)					
Lubrication	Non-lube					
Piston speed	50 to 500 mm/s					
Cushion ^{Note 1)}	Rubber bumper on both ends					
Rod end thread	Male thread					
Stroke length tolerance	± 1.0 0 mm					
Rod non-rotating accuracy ^{Note 2)}	$\pm 0.8^\circ$		$\pm 0.5^\circ$			

Note 1) ø6: With auto switch, single rubber bumper

Note 2) No load: Rod at retracted

Standard Stroke

(mm)

Bore size (mm)	Standard stroke (mm)

C(D)UK32-□ S T	331 (404)	357 (435)	422 (500)

* For the auto switch weight, refer to page 1271.

Tightening Torque

When mounting a CUK single acting series, refer to page 728.

Theoretical Output

Specifications are the same as single acting, spring return/spring extend type (CU series). Refer to page 740.

Spring Reaction Force

Refer to page 1572 (Table (3): Spring Reaction Force).

Auto Switch Mounting Position

For the auto switch mounting position of CDUK series single acting, spring return/spring extend, refer to page 745, since specification are the same as standard type, single acting, spring return/spring extend type.

Allowable Rotational Torque

Make sure that rotational torque is not applied to the piston rod of the CUK series single acting type cylinder. If the rotation torque were applied unavoidably, refer to page 747.

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions. Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the [Web Catalog](#).

Construction

Single acting, Spring return

Component Parts

No.	Description	Material	Note
1	Cylinder tube	Aluminum alloy	Hard anodized
2	Head cover	Brass	ø6 to ø10, Electroless nickel plated
		Aluminum alloy	ø16 to ø32, Chromated
3	Piston	Brass	ø6
4	Piston	Aluminum alloy	ø10 to ø32, Chromated
		Aluminum alloy	ø10
5	Piston rod	Stainless steel	
6	Bumper A	Urethane	
7	Bumper B	Urethane	
8	Return spring	Piano wire	Zinc chromated
9	Spring seat	Brass	
10	Spring seat	Brass	

With auto switch

Component Parts

No.	Description	Material	Note
11	Retaining ring	Carbon tool steel	Phosphate coated

* For the auto switch weight, refer to page 1271.

Allowable Rotational Torque

Make sure that rotational torque is not applied to the piston rod of a long stroke type cylinder. If the rotation torque were applied unavoidably, refer to page 747 for details.

Tightening Torque

When mounting a CUK long stroke series, refer to page 728.

Theoretical Output

Specifications are the same as CU series double acting, single rod. Refer to page 728.

Auto Switch Mounting Position

For the auto switch mounting position of CDUK long stroke series, refer to page 732, since specifications are the same as standard type, double acting, single rod type.

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions.

Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the [Web Catalog](#).

Free Mount Cylinder with Air Cushion

CU Series

New air cushion mechanism

Extended dimensions (compared to the standard CU models) are hardly noticeable.

(with rubber bumper)

- Overall length: **+1.5 to 7 mm**
- Overall height: **+0 to 2 mm**
No air cushion protrusion.
- Overall width: not affected

Bore size	Extended dimensions (mm)	
	Length	Height
ø20	7	2
ø25	1.5	0
ø32	4	0

Unique air cushion construction requires no cushion ring.

Working principle

- ① When the piston is retracting, air is exhausted through both A and A' until piston seal H passes air passage A.
- ② After piston seal H has passed air passage A, air is exhausted only through A'. The section marked with slanted lines becomes a cushion chamber, and an air cushion effect is achieved.
- ③ When air is supplied for the piston extension, the check valve opens and the piston extends with no delay.

Free mounting

3 types of mounting orientations can be accommodated depending on the installation conditions.

Approximately 2.4 times of allowable kinetic energy

(Compared to the old CU series with rubber bumper)

Improved allowable kinetic energy absorption.

Improved sound insulation (Reduced impact noise at the stroke end)

- Noise reduction of more than 11 dB is possible (compared to the CU20 series with rubber bumper).

Interchangeable mounting

Mounting dimensions (J, K, R, and E) are the same as the rubber bumper type CU series.

Improved repeatability

When compared to rubber bumper type actuators, air cushion type cylinders are less likely to be affected by pressure fluctuations, and therefore better able to achieve a stable and smooth stroke.

(mm)		
Bore size (mm)	A	B
20	21	23
25	27	25
32	35	27

Caution on Proximity Installation

When free mounting cylinders equipped with auto switches are used, the auto switches could activate unintentionally if the installed distance is less than the dimensions shown in the table. Therefore, make sure to provide a greater clearance. If the cylinders must be mounted closer than the mounting pitch in the table due to unavoidable circumstances, a magnetic shield must be provided to prevent the cylinders from interfering with each other. Therefore, install a steel plate between the cylinder tubes, or attach a magnetic shielding plate (MU-S025) to the cylinder where it faces the other cylinder's auto switch. Auto switches may malfunction if a magnetic shield is not used.

Bore size (mm)	Mounting pitch L (mm)
20	40
25	46
32	56

Dimensions of shielding plate (MU-S025) that is sold separately are indicated as reference.

Material: Ferrite stainless steel, Thickness: 0.3 mm
The product can be attached to the cylinder since the bottom side is a seal type.

CU Series Specific Product Precautions

Be sure to read this before handling the products. Refer to page 20 for safety instructions and pages 21 to 30 for actuator and auto switch precautions.

Installation and Removal of Retaining Rings

⚠ Caution

1. Use appropriate pliers (Type C retaining ring installing tool) for installation and removal of retaining rings.
2. Even when using appropriate pliers (Type C retaining ring installing tool), proceed with caution as there is a danger of the retaining ring flying off the end of the pliers (tool) and causing bodily injury or damage to nearby equipment. After installation, make sure that the retaining ring is securely seated into the retaining ring groove before supplying air.

Mounting

⚠ Caution

1. Refer to the below table for mounting cylinders.

Tightening Torque

Bore sizes (mm)	Hexagon socket head cap screw (mm)	Proper tightening torque (N·m)
20, 25	M5	5.10 ±10%
32	M6	8.04 ±10%

Selection

⚠ Caution

1. Operate the cylinder to the stroke end.
When the stroke is restricted by an external stopper or a clamped workpiece, sufficient cushioning and noise reduction may not be achieved.
2. Strictly observe the limiting ranges for load mass and maximum speed (Graph (1)). Also, the limiting ranges provided here are based on the condition that the cylinder is operated to the stroke end with a proper cushion needle adjustment.

If operated beyond the limiting ranges, excessive impact will occur and this may cause damage to equipment.

Graph (1)

Selection

⚠ Caution

3. Adjust the cushion needle to reduce excessive kinetic energy from the piston impact at the stroke end by allowing it to absorb sufficient kinetic energy during the cushion stroke.

If due to improper adjustment, the piston impacts the stroke end with excessive kinetic energy (values above those given in Table (1)), an excessive impact will occur and this may cause damages to equipment.

Table (1) Allowable Kinetic Energy at Piston Impact (J)

Piston speed	20	25	32
	50 to 500 mm/s		
Allowable kinetic energy	0.055	0.09	0.15

4. Strictly observe the limiting ranges for the piston rod lateral load (Graph (2)).

If operated beyond the limiting ranges, equipment life may be reduced or damage to equipment may occur.

Piston Rod Lateral Load (Graph (2))

Cushion Needle Adjustment

⚠ Caution

1. Keep the adjustment range for the cushion needle between the fully closed position and the rotations shown below.

	Rotations
ø20 to ø32	2.5 rotations or less

Use a 3 mm flat head watchmakers' screwdriver to adjust the cushion needle. The adjustment range for the cushion needle must be between the fully closed position and the open position ranges indicated in the above table. A retaining mechanism prevents the cushion needle from slipping out; however, it may spring out during operation if it is rotated beyond the ranges shown above.

Free Mount Cylinder for Vacuum

ZCUK Series

A free mount cylinder with a vacuum passage in the rod to meet the requirements for **Air cylinder** + **Vacuum pad**.

A vacuum passage has been provided in the rod of the CUK cylinder to enable a vacuum pad to be installed on the end of the rod.

Not necessary to provide vacuum tubing space at the end of the rod.

The area around the vacuum pad is uncluttered.

● Non-rotating rod ●

A guide is provided as standard equipment

Non-rotating rod accuracy
(no load: when the rod is retracted on the detent plate side):
 $\phi 10, \phi 16$ $\pm 0.8^\circ$
 $\phi 20, \phi 25, \phi 32$ $\pm 0.5^\circ$

Do not apply a lateral load to the piston rod. Because the piston rod is a hollow rod, a lateral load can cause the piston rod to bend or break.

● Auto switch

Reed auto switch:

D-A9□ (Heavy-duty cord, in-line entry)

D-A9□V (Heavy-duty cord, perpendicular entry)

Solid state auto switch:

D-M9□, D-M9□W (Heavy-duty cord, in-line entry)

D-M9□V, D-M9□WV (Heavy-duty cord, perpendicular entry)

● Vacuum pad (Pad diameter: $\phi 2$ to $\phi 50$) ●

<Perpendicular female thread>

<Male thread>

<Direct mounting>

<Barb fitting>

● How to provide piping to the vacuum side

Cap piping

The piston rod of the vacuum side does not protrude. Also, the vacuum outlet tube does not move when the piston is operating.

Vacuum port pressure range: -101 kPa to 0.6 MPa
Pressurize only when releasing the vacuum. At that time, use it under the cylinder operating pressure.

Rod piping

Lighter weight than the cap piping.

Can also be used for air blowing.

Vacuum port pressure range: -101 kPa to 0.6 MPa

Free Mount Cylinder for Vacuum

ZCUK Series

How to Order

Specifications

Bore size (mm)	ø10	ø16	ø20	ø25	ø32
Fluid	Air				
Proof pressure	1.05 MPa				
Maximum operating pressure	0.7 MPa				
Minimum operating pressure	0.13 MPa				
Vacuum port pressure	-101 kPa to 0.6 MPa (At vacuum release 0 to 0.6 MPa) ^{Note}				
Ambient and fluid temperature	Without auto switch: -10 to +70°C (No freezing) With auto switch: -10 to +60°C (No freezing)				
Lubrication	Not required				
Piston speed	50 to 500 mm/s				
Cushion	Rubber bumper on both sides				
Stroke allowance	+1.0 0				
Rod tip screw	With or without (Pad direct mounting)				
Mounting	Basic type				
Applicable pad	Refer to page 780 for details.				

Note) For a cap type, supply pressure only when vacuum is released. That pressure should be less than the cylinder pressure.

Non-rotating Rod Accuracy (No load/At retraction of the rod at the locking plate side)

Bore size (mm)	ø10	ø16	ø20	ø25	ø32
Non-rotating rod accuracy	±0.8°			±0.5°	

⚠ Precautions

Be sure to read this before handling the products.

Refer to page 20 for safety instructions and pages 21 to 30 for actuator and auto switch precautions.

⚠ Caution

- Do not place your finger in the clearance between the detent plate and the cylinder tube. Never put your finger between the non-rotating plate and cylinder tube. Your finger may be pinched when the piston rod retracts. If your finger is caught, it could injure your finger because the cylinder outputs a considerable amount of force.
- Make sure that rotational torque is not applied to the piston rod. If this is unavoidable, operate the cylinder within the allowable rotational torque listed in the table below.

Allowable Rotational Torque

Bore size (mm)	ø10	ø16	ø20	ø25	ø32
Allowable rotational torque (N·m)	0.02	0.04	0.10	0.15	0.20

- To secure a workpiece to the end of the piston rod, tighten the workpiece onto the piston rod with the piston rod fully retracted so that torque is not applied to the piston rod.
- To install a cylinder, tighten it within the torque values indicated in the table below.

Proper Tightening Torque

Bore size (mm)	Hexagon socket head bolt diameter (mm)	Proper tightening torque (N·m)
ø10	M3	1.08 ± 10%
ø16	M4	2.45 ± 10%
ø20, ø25	M5	5.10 ± 10%
ø32	M6	8.04 ± 10%

Moisture Control Tube IDK Series

When operating an actuator with a small diameter and a short stroke at a high frequency, the dew condensation (water droplet) may occur inside the piping depending on the conditions. Simply connecting the moisture control tube to the actuator will prevent dew condensation from occurring. For details, refer to the [Web Catalog](#).

ZC(D)UKQ Cylinder bore – Stroke **D**

Technical drawing of the 1000 Series Hydraulic Cylinder, showing front and side views with dimensions and component labels.

Front View Dimensions:

- Port size: $2 \times \phi 3.2$ through
- Mounting holes: $2 \times M5 \times 0.8$
- Stroke: $\phi 4 / \phi 2.5$ Urethane tube (TU0425)
- Soft nylon tube (TS0425)
- Seal washer
- Dimensions: 7, 16.5, 16, $\phi 3.4$

Side View Dimensions:

- Mounting holes: $M4 \times 0.7$
- Port size: $2 \times \phi 3.2$ through
- Stroke: $4 \times \phi 6$ depth 5 counterbore
- Dimensions: 12, 11, $\phi 4$, 10, 8, 7, 21, 36 + Stroke, 6, 5, 7 + Stroke, $70 + 2 \times \text{Stroke}$

Technical drawing of a vacuum socket (Type 1) showing front and side views with dimensions and labels.

Front View Dimensions:

- C (FY): Overall height
- Y : Distance from base to center of hole
- L : Distance between hole centers
- FK : Distance from base to hole center
- B : Base width
- ϕD : Outer diameter
- J : Distance from hole center to edge
- ϕd through: Hole diameter
- L : Width across flats

Side View Dimensions:

- $2 \times \phi P$ through: Hole diameter
- $2 \times M5 \times 0.8$ ($\phi 32: 2 \times 1/8$): Threaded hole specification
- $\phi 32$: Outer diameter of threaded section
- GC : Distance from hole center to end
- GA : Distance from hole center to end
- FL : Flange length
- MM : Mounting hole diameter
- $Seal washer$: Seal washer
- A : Distance from hole center to end
- A' : Distance from hole center to end
- E : Distance from hole center to end
- F : Distance from hole center to end
- H : Distance from hole center to end
- $Z + 2 \times \text{Stroke}$: Total length
- $S + \text{Stroke}$: Stroke length
- $HA + \text{Stroke}$: Stroke length
- SA : Stroke length
- 10 : Total length

Labels:

- Port size
- Vacuum port size
- Socket (Only $\phi 16$)
- $M5 \times 0.8$
- Hexagon width across flats 8

Note 1) Figures in the table above are used as a reference when mounting the auto switches for stroke end detection. In the case of actually setting the auto switches, adjust them after confirming their operation.

Note 2) Negative figures in the table show dimensions mounted inside cylinder body.

Note 3) In the case of 5 mm stroke or the 10 mm stroke, there are times in which the auto switches will not turn OFF or 2 auto switches will turn ON simultaneously due to their movement range. Therefore, set the position approximately 1 to 4 mm outward from the values given in the table above. Then, perform an operation inspection to make sure that the auto switches operate normally (if 1 switch is used, make sure that it turns ON and OFF properly; if 2 auto switches are used, make sure that both switches turn ON).

Note 4) Figures in () in the table W are D-A90 and A93.

Operation Range

Auto switch model	Bore size (mm)				
	10	16	20	25	32
D-A9□, A9□V	6	9	11	12.5	14
D-M9□, M9□V					
D-M9□W, M9□WV	4	5	7	7	7
D-M9□A, M9□AV					

* Since this is the average value at a normal temperature including hysteresis (tolerance $\pm 30\%$), it is not guaranteed.

Figures may change substantially depending upon the surrounding environment.

Mounting of Auto Switch

Cautions on Proximity Installation

When free mounting cylinders equipped with auto switches are used, the auto switches could activate unintentionally if the installed distance is less than the dimensions shown in the table. Therefore, make sure to provide a greater clearance. If the cylinders must be mounted closer than the mounting pitch in the table due to unavoidable circumstances, a magnetic shield must be provided to prevent the cylinders from interfering with each other.

Therefore, install a steel plate between the cylinder tubes, or attach a magnetic shielding plate (MU-S025) to the cylinder where it faces the other cylinder's auto switch. Auto switches may malfunction if a magnetic shield is not used.

Bore size (mm)	Mounting pitch L (mm)
10	20
16	33
20	40
25	46
32	56

Shielding plate (MU-S025) dimensions

Material: Ferrite stainless steel, Thickness: 0.3 mm
The product is attached to the cylinder since the bottom side is pre-treated with adhesive glue.

Weight

Basic Type/With Auto Switch (): Denotes the values with D-A93.

Unit: g

Besides the models listed in How to Order, the following auto switches are applicable.

- * For solid state switches, auto switches with a pre-wired connector are also available. Refer to pages 1340 and 1341 for details.
- * Normally closed (NC = b contact) solid state switches (D-M9C□E(V)) are also available. Refer to page 1290 for details.
