

Compact Cylinder with Air Cushion

RQ Series

ø20, ø25, ø32, ø40, ø50, ø63, ø80, ø100

Uses a unique air cushion mechanism with no cushion ring.

The **new standard** for the future

New **Air Cushion Cylinder**

Model	Mounting	Rod end configuration	Standard stroke	Auto switch

R(D)Q□25				
R(D)Q□32				
R(D)Q□40				
R(D)Q□50				
R(D)Q□63				
R(D)Q□80				
R(D)Q□100				

* Size ø20 and ø25 have through-holes and double end taps in common.

Future new standard for shock elimination,

**Employs a new construction
for the air cushion mechanism.**

Compact Cylinder with Air Cushion

RQ Series

Unique air cushion construction with no cushion ring

Elimination of the cushion ring used in current cushion ring type air cushions has made it possible to reduce the overall length of the cylinder. This produces an air cushion cylinder which retains the merits of a compact design.

Working principle

- ① When the piston is retracting, exhaust is discharged from both A and A' until piston seal H passes the air passage A.
- ② After piston seal H has passed the air passage A, exhaust is discharged only from A'. The section marked with diagonal lines becomes a cushion chamber, and a cushioning effect is achieved.
- ③ When air is supplied for piston extension, the check seal opens and the piston starts with no delay.

noise reduction and improvement in repeatability

Minimal extended dimensions from **+2.5 mm to 13 mm**
 (Compared with series CDQS/CDQ2 of the same bore size with auto switches)

RDQ series

CDQS series

Extension

Series	Bore size	Extended dimension	Comparable cylinder
RDQ series	20	+2.5 mm	CDQS series
	25	+4 mm	
	32	+4 mm	
	40	+4.5 mm	CDQ2 series
	50	+9 mm	
	63	+9 mm	
	80	+10 mm	
100	+13 mm		

Nearly three times the allowable kinetic energy
 (Compared to the CQS/CQ2 series with rubber bumper)
 Improved energy absorption allows selection of a cylinder that is two sizes smaller for the same kinetic energy.

Interchangeable mounting
 The mounting dimension "M" is the same as the compact cylinder **CQS/CQ2** series.
 (CQS/CQ2 mounting brackets can be used without any changes.)

**Improved noise reduction
 (Stroke end impact noise reduced)**

- Decrease of 19dB or more (Compared with the **CQ2** series without cushion)
- Decrease of 14dB or more (Compared with the **CQ2** series with rubber bumper)

Improved repeatability
 The piston contact surface at the stroke end is metal, providing improved repeatability for the stopping position as compared with a rubber bumper.

Added compact type foot brackets

- Compact foot bracket has the same width as the cylinder. Overall width reduced by up to **42%** (for $\phi 20$)

■ More compact installation space possible

- Short pitch mounting is possible. ● Allows installation close against a wall.

Bore size (mm)	Compact foot type width A (mm)	Current foot type width B (mm)	Reduced width for short pitch mounting (mm)		
			1 unit	2 units	3 units
20	36	62	26	52	78
25	40	66	26	52	78
32	45	71	26	52	78
40	52	78	26	52	78
50	64	95	31	62	93
63	77	113	36	72	108
80	98	140	42	84	126
100	117	162	45	90	135

* Short pitch mounting is possible only without auto switch.

- Height from the bottom of brackets to the center of a cylinder is the same as the current model.

Compact Cylinder with Air Cushion

RQ Series

ø20, ø25, ø32, ø40, ø50, ø63, ø80, ø100

How to Order

With auto switch **RQ B 32 - 50 -**

With auto switch **RDQ B 32 - 50 - M9BW -**

With auto switch
(Built-in magnet)

Mounting bracket

B Through-hole (Standard)	F Rod side flange type
A Both ends tapped type	G Head side flange type
L Foot type	D Double clevis type
LC Compact foot type	

Note 1) Mounting brackets are packed together when shipped (unassembled).
 Note 2) Since sizes ø20 and ø25 have a body with type B (Through-hole) and type A (Both ends tapped type) in common, there is no type A part number. Example) RQA 20-30 does not exist.
 Note 3) Cylinder mounting bolts are not included. Order them separately referring to Mounting Bolts for ROB on page 1041.

Number of auto switches

Nil	2 pcs.
S	1 pc
n	"n" pcs.

Auto switch

Nil	Without auto switch
------------	---------------------

* Refer to the table below for the applicable auto switch model.

Body option

Nil	Rod end female thread (Standard)
M	Rod end male thread

Bore size

20	20 mm	50	50 mm
25	25 mm	63	63 mm
32	32 mm	80	80 mm
40	40 mm	100	100 mm

Cylinder stroke (mm)
Refer to "Standard Stroke" on page 1040.

Thread type

Nil	M thread	ø20, 25
	Rc	
TN	NPT	ø32 to ø100
TF	G	

Built-in Magnet Cylinder Model
 If a built-in magnet cylinder without an auto switch is required, there is no need to enter the symbol for the auto switch.
 (Example) RDQL40-50

Applicable Auto Switches/Refer to pages 1271 to 1365 for further information on auto switches.

Type	Special function	Electrical entry	Indicator light	Wiring (Output)	Load voltage		Auto switch model		Lead wire length (m)					Pre-wired connector	Applicable load

*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.

*2 1 m type lead wire is only applicable to D-A93.

* Lead wire length symbols: 0.5 m..... Nil (Example) M9NV
 1 m..... M (Example) M9NWM
 3 m..... L (Example) M9NLW
 5 m..... Z (Example) M9NZW
 None..... N (Example) J79CN

* Solid state auto switches marked with a "○" are produced upon receipt of order.

** The D-P3DWA is mountable on bore size ø25 to ø100.

* Besides the models in the above catalog, there are some other auto switches that are applicable. For more information, refer to page 1056.

* Refer to pages 1340 and 1341 for the details of auto switches with a pre-wired connector.

* When mounting brackets (foot/flange type) are used, then in some cases auto switches cannot be retrofitted.

Symbol
Air cushion

D-A93	0.05 to 0.10													
D-M9□A(V)														
D-A9□(V)	0.10 to 0.20													
(Excludes the D-A93)														

* Auto switch mounting bracket and auto switch are enclosed with the cylinder for shipment.

For an environment that needs the water-resistant auto switch, select the D-M9□A(V) type.

Auto switch mounting bracket for the D-F7BA(V) type uses BQ4-012 and BQ5-032 normal specifications (metal screw).

* D-A7/A8/F7/J7 types cannot be mounted on ø20 and ø25.

[Stainless Steel Mounting Screw Kit]

The following stainless steel mounting screw kit (with nuts) is available. Use it in accordance with the operating environment. (Since auto switch spacer (for BQ-2) is not included, order BQ-2 separately.)

BBA2: For D-A7/A8/F7/J7 types

The above stainless steel screws are used when a cylinder is shipped with the D-F7BA/F7BAV auto switches.

When only one auto switch is shipped independently, the BBA2 is attached.

* Refer to the [Web Catalog](#) for details on the BBA2.

Other than the applicable auto switches listed in "How to Order", the following auto switches can be mounted.

Other Applicable Auto Switches

Refer to pages 1271 to 1365 for further information on auto switches.

Type	Model	Electrical entry (Fatching direction)	Features	Type	Model	Electrical entry (Fatching direction)	Features
Reed auto switch	D-A73, A72	Grommet (Perpendicular)	—	Solid state auto switch	D-F7NV, F7PV, F7BV	Grommet (Perpendicular)	—
	D-A80	Grommet (In-line)	Without indicator light		D-F7NWV, F7BWV		Diagnostic indication (2-color indicator)
	D-A73H, A72H, A76H		Without indicator light		D-F7BAV		Water resistance (2-color indicator)
	D-A80H	Connector (Perpendicular)	Diagnostic indication (2-color indicator)		D-F79, F7P, J79	Grommet (In-line)	Diagnostic indication (2-color indicator)
	D-A79W		Without indicator light		D-F79W, F7PW, J79W		Water resistance (2-color indicator)
	D-A73C	Connector (Perpendicular)	Without indicator light		D-F7BA		With timer
	D-A80C		Without indicator light		D-F7NT		With diagnostic output (2-color indicator)
					D-F79F		—
					D-J79C	Connector (Perpendicular)	—

* For solid state auto switches, auto switches with a pre-wired connector are also available. Refer to pages 1340 and 1341 for details.

* Normally closed (NC = b contact) solid state auto switches (D-M9□E(V)) are also available. Refer to page 1290 for details.

* D-A7/A8/F7/J7 types cannot be mounted on ø20 and ø25.

RQ Series

Specific Product Precautions

Be sure to read this before handling the products.

Refer to page 20 for safety instructions and pages 21 to 30 for actuator and auto switch precautions.

Installation and Removal of Retaining Ring

⚠ Caution

1. Use appropriate pliers (Type C retaining ring installing tool) for installation and removal.
2. Even when using appropriate pliers (Type C retaining ring installing tool), proceed with caution as there is a danger of the retaining ring flying off the end of the pliers (Type C retaining ring installing tool) and causing human injury or damage to nearby equipment. After installation, confirm that the retaining ring is securely seated into the retaining ring groove before supplying air.

Selection

⚠ Caution

1. Operate the cylinder to the stroke end.
When the stroke is restricted by an external stopper or a clamped work piece, satisfactory cushioning and noise reduction may not be achieved.
2. Strictly observe the limiting ranges for load mass and maximum speed (Graph (1)). Also, the limiting ranges are based on operation of the cylinder to the stroke end and proper adjustment of the cushion needle.

If operated beyond the limiting ranges, excessive impact will occur and this may cause damage to equipment.

Graph (1)

3. Adjust the cushion needle to reduce excessive kinetic energy from the piston impact at the stroke end by absorbing enough kinetic energy during the cushion stroke.

If the piston impacts the stroke end with excessive kinetic energy (values in Table 1 or more), an excessive impact will occur and this may cause damage to equipment.

Table (1) Allowable Kinetic Energy At Piston Impact Unit: [J]

	20	25	32	40	50	63	80	100
Piston speed	50 to 500mm/s							
Allowable kinetic energy	0.055	0.09	0.15	0.26	0.46	0.77	1.30	2.27

Selection

⚠ Caution

4. Strictly observe the limiting ranges for the piston rod lateral load (Graph (2)).

If operated beyond the limiting ranges, this may cause the equipment life to be reduced or damage to equipment may occur.

Graph (2)

Cushion Needle Adjustment

⚠ Caution

1. Readjust with a Cushion Needle

When the product is shipped, the cushion needle is open 1/4 to 1/2 turn from the fully closed position. Readjust the position depending on the load or operating speed before using.

Note that the needle must be fully closed first, and then gradually reopened when adjusting.

2. Keep the adjustment range for the cushion needle between the closed position and the rotations shown below.

	Rotations
ø20 to ø100	2.5 rotations or less

Use a 3 mm flat head watchmakers screw driver to adjust the cushion needle. The adjustment range for the cushion needle must be between the closed position and the open position ranges above. A retaining mechanism prevents the cushion needle from coming out, however, it may spring out during operation if it is rotated beyond the ranges shown above.
